

Smart Warehouse Operations Start Here

Gemini Series® Mobile Data Collection Software

**Supply Chain Management is Complex.
But That Doesn't Mean your Data Collection
Process Needs to be Complicated...**

- » Complete integration with your existing Oracle ERP systems
- » OS-Agnostic Smart Device Scanning eliminates manual data input
- » Browser-based, multi-language interfaces
- » User-friendly screens

Nor Does It Need to Be Costly...

- » No expensive or complex Oracle customizations needed
- » Replaces manual "key-ins" of data on the shop floor to increase data accuracy, worker productivity and operational speed
- » Automatically corrects errors & validates data to improve inventory accuracy rates to >99%

Fortunately, the Gemini Series® mobile data collection software by TAKE Supply Chain™ has been optimized over the last 20 years to eliminate every one of those challenges at the core of your business processes. Gemini's automated data capture and real-time processing capabilities not only harmonize the flow of your end-to-end supply chain operations, but they provide the fundamental building blocks you need for future digital technology innovation. After all, the advantages of predictive analytics, augmented reality and IoT are defined by the quality and timeliness of data driving those systems.

**Configured to Keep Your Entire Warehouse Operations
in Sync No Matter What the Future Brings**

Only Gemini's Real-Time Processing Technology Can Give You Real-Time Visibility + Complete Control Over Every Transaction (At All Times)

Data Collection Has Never Been So Simple – or Saved You So Much Time and Money

Keystrokes matter to your KPIs. Every decision you make and every action you take to improve the quality, speed, and accuracy of your extended manufacturing and distribution operations are dependent on the quality, speed, and accuracy of the data captured by your team, customers and suppliers. But that's just one reason to standardize on TAKE Supply Chain's Gemini Series® mobile data collection software today. There are many, many more...

Gemini Stays in Sync with Oracle at All Times to Keep Your Team Informed in Real Time

Did you know this single Gemini mobile data collection solution not only extends your existing Oracle® EBS to the shop and warehouse floor, but also bridges the gaps between your ERP, MRP, WMS and TMS systems? That means that your warehouse, logistics, sales, and field service staff will gain complete visibility into every piece of data being processed through every one of your back-office systems via the Gemini portal alone. In fact, this single source of material and inventory traceability is all you need to increase overall process accuracy and optimization throughout the entire value chain. That's the real advantage of Gemini's exclusive real-time processing capabilities – and the key to securing a greater ROI for every one of your connected technology systems, including Oracle.

With Gemini, No Costly Modifications to Your Existing Infrastructure are EVER Needed

Gemini makes use of existing Oracle ERP investments by integrating directly with the Oracle data model. This approach leverages setups, tolerances, and profiles already defined in your company's Oracle deployment, which minimizes implementation, training, and ongoing support costs. It also lowers the total cost of ownership. And did we mention that Gemini is compatible with any and all of your existing devices that run on a Windows® or Android™ OS? In fact, Gemini's friendly GUI (user interface) is optimized for standalone barcode scanners, devices with built-in scanners – such as tablets, laptops, smartphones or other handheld PCs – and even label printers and scales. Yes, you just saved you more money.

Add a New Level of Visibility, Mobility and Agility to Your Warehouse Operations

Did You Know?

Gemini has been the single source of traceability for hundreds of millions of dollars in materials and finished goods for leading companies across the globe. We have been refining Gemini's leading-edge architecture for over two decades and, as a result, consistently provide our customers with the exact level of software flexibility and overall system expandability they need to remain successful for years to come.

Gemini Automates Your Most Complex Manufacturing Processes at a Fundamental Level

If it's speed you need, then it's Gemini you want. As long as you're using a Gemini-equipped mobile device to capture data, you'll never have to manually complete a document or key information into an Oracle form again. Gemini's barcode configuration feature enables you to capture and store information for multiple transactional data fields on a single barcode to save scanning time. And, to further prevent data duplication and errors, Gemini validates all data directly from Oracle tables and views using built-in APIs to process the data. (We don't use customized or third-party tables or APIs.) As a result, you can expect to exceed 99 percent inventory accuracy rates every time.

Goods organized and sorted in warehouse.

Real-Time Inventory Visibility and Lot Traceability = Win-Win for All Decision Makers

Since Gemini updates and validates against Oracle's ERP in real time, all data scanned during shipping, receiving, and production stages instantly update in associated Oracle forms. Again, that means you will be able to track and trace inventory movement in, across, and out of your facilities 24 hours a day at more than a 99 percent accuracy rate. Even better, management will have the insights needed to make more informed and timely decisions – and improve control over warehouse operations – throughout the entire product lifecycle.

Gemini Simplifies Your Data Collection to Improve Transactional Efficiency Across Warehouse Operations Including:

Take Action Now to Protect Your Future

Give your team access to Gemini, and you'll give them access to the insights they need to make well-informed decisions.

Empower them to take real-time action to improve operational performance at "ground zero" – inside the warehouse – and you'll gain an unrivaled competitive advantage. Because, as we all know, a smarter warehouse operation ultimately improves the accuracy and optimization of your entire supply chain and extends your ROI far beyond those four walls.

Contact us today to learn more about how the leading-edge architecture of this next-generation solution can bridge the data collection gaps between your internal systems and close the communications gaps between shop floor workers and decision makers...once and for all.
